

Exercise for a thorough reading of your text

**Read one
chapter at a
time**

Step 1: Turn headlines in to questions

If you have a headline like:
“Aerobe effect” you could turn that
into: “What is the Aerobe effect?”

Step 2: Read the chapter and answer your own questions

Answer the questions from above
when you are done reading the
chapter.

You can also highlight the places
where you found the answer.

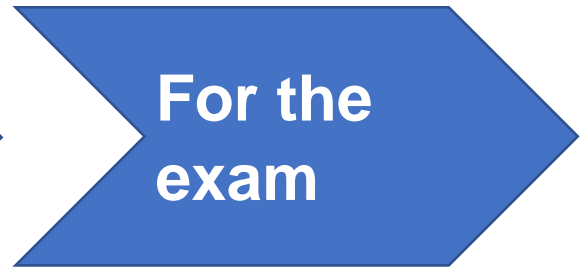

**Use the
texts margin**

Step 3: Write your questions and reflections in the margin of the text

This way you have your
reflections very close to the
reason for your reflections.

You can e.g. write “I don’t
understand this, ask teacher
tomorrow” or “Why is this
aerobe and not anaerobe?”

Use the reflections in the study
group as well.

**For the
exam**

Step 4: Ask 5 questions about central concepts in the text, when your done reading

Use the questions for repetition
when reading for the exam.

Step 5: use your reflections and notes

When reading for the exam you can
save time by starting out by reading
your own notes and reflections that
you wrote in the margin.

You may need to read some parts
of the text again.
